RIB Software SE (RIB) signs a Phase-II-contract (No. 30 / 2020) with Leier Baustoffe GmbH & Co. KG

Stuttgart, Deutschland, 06 October 2020. RIB Software SE, the world's leading provider of iTWO 5D BIM Big Data technology for the construction industry, today announced the conclusion of a Phase-II-contract with Leier Baustoffe GmbH & Co. KG.

With 35 production sites in many Eastern European countries and the headquarters in Burgenland, Austria, Leier is one of the most important domestic companies for building material and prefabricated element. The traditional company was founded in 1965 by Michael Leier, who still leads it today with three generations of the Leier family. Approximately 3,000 employees work for the company in the areas of prefabricated parts (walls, ceilings, stairs) for building construction, concrete products as well as gardening and landscaping and supply customers at home and abroad. Furthermore, car dealerships, hotels and its own real estate management belong to the group of companies.

Josef Fleischhacker, Managing Director for investments at Leier: "At the new location in the border triangle of Austria, Hungary and Slovakia we find perfect conditions to produce precast elements and concrete products. With the RIB solution iTWO Smart Production, we will efficiently automate the new double-wall plant and integrate it into the management of our entire precast element production process with iTWO PPS - starting with sales and planning, through work preparation and production, to logistics and assembly. We were particularly impressed by the innovative technology and the competent support provided by the RIB".

Dr. Christian Hanser, Managing Director of RIB SAA in Vienna: "We are delighted to be able to help shape another milestone in the success story of the Leier company and will join forces to provide optimal support for the company in its digital, company-wide transformation. Only the processing of BIM data for the production process enables the efficient production of finished parts in batch size 1. With this contract, RIB once again demonstrates the wide range of modern solutions we can offer our customers".

About RIB Group

RIB Software SE is an innovator in the building and construction industry. The company develops and offers cutting-edge digital technologies for construction enterprises and projects across various industries worldwide. iTWO 4.0, RIB's flagship cloud-based platform, provides the world's first enterprise cloud technology based on 5D BIM with AI integration for construction companies, industrial companies, developers and project owners, etc. With over 50 years of experiences in the construction industry, RIB Software SE focuses on IT and engineering and becomes the pioneer in construction innovation, exploring and bringing in new thinking, new working methods and new technologies to enhance construction productivity.
